Making Products Available in the Community: A Workshop to Introduce a Manager's Tool to Improving Community Health Supply Chains

Participant Workbook

November 2013

A. What Supply Chain Problems Are You Facing?

Instructions:

In your small group, discuss the following questions. Make note of any particular challenges that you experience with your community health supply chain.

1. What challenges does your community health supply chain have with product flow?

- 2. What challenges does your community heath supply chain have with data flow?
- 3. How effective is your staff in managing the community supply chain? What hinders or supports them in their supply chain tasks?
- 4. How effective is the quantification and coordination of products coming into the program?
- 5. What organisation is responsible for managing and improving your community health supply chain? How effective is that organisation? Are roles and responsibilities clear? Procedures documented and followed? Lines of communication clear? Mechanisms of coordination known and used? Process for supply chain performance evaluation and improvement routinely implemented?

B. How can your community health supply chain benefit from the experience of Malawi, Rwanda and Ethiopia in designing, testing and implementing solutions to their supply chain challenges?

1. Product Flow 2. Data Flow 3. Effective People

Instructions:

List ideas from these country examples that you can try with your community health supply chain. Think about the following question: Why would you consider some of the interventions, but not others?

C. How do you currently resupply your CHWs?

Instructions:

	IIIs	otractions.			
	Co	nsider the following questions, and note y	our answe	rs in this workbool	Κ.
	1. How are CHWs in yo	our program resupplied? (Check all that ap	ply)		
	☐ Based on pre	evious consumption for each product			
	☐ Based on a f	ixed standard quantity			
	☐ By no particu	ular process or rules			
	\square Other (pleas	e explain)			
	☐ ??? Not sure				
	2. Is the process for re	supply the same for all CHWs and all prod	ucts?		
	☐ Yes for all Ch	HWs			
	☐ No different	for some CHWs. Please explain:			=
	\square Yes for all pr	roducts			
	☐ No different	for some products. Please explain:			_
	☐ ??? Not sure	2			
	needs to be imp	m? If you have a demand based s proved? the following checklist for your community			
	·	, ,	Yes	Yes, but needs	No
				improvement	
1.	, , , , , , , , , , , , , , , , , , , ,	ply chain have a reliable product igher levels in the supply chain?			
2.		ies occur routinely and take into			
		of the community health supply chain?			
3.		unity health products coordinated and			
1	adequately mobilised? Is data reliably available	for recumply decisions?			
4.	•	upply chain have reasonable			
٥.	•	the health center, or other CHW resupply			
	point, and the CHW loca	,			
	•			+	
6.	-	upply chain have a workforce skilled in			
6.	fundamental supply cha	• • •			

E. Is a demand based resupply system appropriate for your community health supply chain?

Ins	tructions: Discuss the following questions with the large group.
1.	What benefits does a demand based resupply system offer to your program?
2.	What challenges do you see with a demand based system?
3.	Based on the questions found in the checklist, what would you need to put in place or improve to effectively use a demand based resupply system?

4. What changes would need to be made to your community health supply chain to institute a demand based resupply system?

F. Do you need to implement or improve a data reporting system for the community health supply chain?

Instructions: Complete the following checklist for your community health supply chain.

Yes

Yes

No

Don't Know (Note how you might find out?)

Yes, but needs

No

			improvement	
1.	Does your community health supply chain have clear and aligned procedures for reporting and resupply?			
2.	Are the procedures standardized for all CHWs and all community health products?			
3.	Are consumption (calculated or actual) and stock on hand data consistently recorded and reported?			
4.	Do CHWs have a designated facility for resupply? Do they know which facility they should go to for resupply?			
5.	Does the designated resupply facility have consumption (calculated or actual) and stock on hand data available for making resupply decisions?			
6.	Do managers at districts and central level have stock data to monitor the performance of the community health supply chain?			
7.	Are consumption and stock on hand data available and used for quantification?			
G	. What types of reporting system can you consid health supply chain?	er for	'your communi	ty
Ins	tructions: Complete all three checklists.			
	a) Is your community supply chain ready for a data reporting?	mHea	lth system for	

1. Does your country have reliable mobile coverage

2. Can resources be secured for the upfront investment in

throughout?

technology and training?

3.	Is internet available at least at central level?			
4.	Is there an organisational unit able to manage the administration and management of the technical aspects of an mHealth system?			
	b) Can you set up a simple and affordable man make an existing one work better?	ual sys	stem? Or can	you
		Yes	Yes, but needs improvement	No
1.	Do you have the resources to ensure that the recording and reporting tools are reliably available and distributed to all levels in the system?			
2.	Are roles and responsibilities clear for data collection and aggregation?			
3.	Are data managers available or can they be employed for data processing and dissemination?			
	c) Implementing any kind of reporting system do you have these or can you mobilize the re	_		ing,
		Yes	Yes, but needs improvement	No
1.	Do managers have the skills to use data and reports to make resupply decisions and monitor supply chain performance?			
2.	Are there resources for initial and ongoing refresher training?			

H. What data reporting system is right for your community health supply chain?

Instructions: Discuss the following questions with your small group considering the responses to the previous checklists. Be prepared to share your discussion with the larger group.

1.	Is it feasible to have a mHealth system?
2.	Based on the questions found in the checklist G. a) on mHealth, what would we need to put in place to implement a mHealth System? Do we know if we can address these? If we don't know who should we contact?
3.	If yes, what can we do? Is there any experience with mHealth systems already within MOH that we can learn from?
4.	If no, should we adopt or improve our manual data flow, or wait and pursue a mobile based system when the conditions are right?
5.	How would a manual system work in our country? What challenges does a manual system pose?
6.	Is this a feasible short term solution on our path to a mHealth system?
7.	A demand based resupply system requires reliable availability of data. If choosing a demand based resupply system, how could you ensure the availability of data?

Product & Data Flow - Action Reflection
Based on the discussion about demand based resupply systems, and mHealth and manual data reporting systems, please note below what actions you could take to change to or strengthen the resupply and data reporting systems for your community health supply chain. For the actions, note how you will undertake the actions, how you will make these changes.

I. How effective are the people working in your community health supply chain and the organisation which supports them?

Instructions: Rate the ability of organisation and people who manage and operate your community health supply chain on a scale of 1 to 5. Circle the rating you think best reflects the situation and write notes on why you selected that rating.

Management				
1. Do CHWs and HC sta	ff have sta	ndardized supply chain proce	dures and	tools for their jobs?
	I			[
1	2	3	4	5
No standard procedures		Some procedures and		Procedures and tools
or tools		tools exist; used		exist and are used
		inconsistently		
2. Do CHWs and HC sta	ff receive s	supply chain training, and refi	esher train	ing as needed?
1	2	3	4	5
No SC training provided		SC training is provided		SC training is provided
		irregularly		as needed
	<u> </u>	o support them in supply chai	n tasks?	
1	2	3	4	5
No SC supervision		SC supervision is		SC supervision is
provided		provided irregularly		provided as needed
Notes:				
Team Work				
4. Do staff from differe	nt levels m	neet routinely to discuss supp	ly chain pei	rformance?
1	2	3	4	5
CHWs & supervisors do		CHWs & supervisors		CHWs & supervisors
not meet to improve SC		meet infrequently		meet routinely on
performance				schedule

		HWs, supervisors, storekeepeelated to the supply chain?	ers etc.) me	eet regularly and
 1 Do not meet/act on SC issues	2	 3 Meet/act irregularly on SC issues	 4	 5 Meet/act regularly on SC issues
6. Are actions plans to improvements?	address sup	oply chain issues documented	l and moni	tored to measure
I 1 Do not document action plan on SC issues Notes:	2	 3 Sometimes document action plan on SC issues	 4	 5 Always document action plan on SC issues
Motivation 7. Are there the mechasupply chain work?	nisms in pl	ace to motivate and apprecia	te CHWs a	nd HC staff for their
 1 No mechanisms to motivate and appreciate CHWs and HC staff	2	 3 CHWs and HC staff inconsistently motivated and appreciated	 	 5 CHWs and HC staff motivated and appreciated when appropriate
Notes:				

Effective People - Action Reflection								
Based on the discussion about effective people, please note below what actions you could take to make the people working in your community health supply chain more effective in ensuring product availability.								

J. Country Specific Action Plan

- 1. What is the supply chain challenge you are addressing?
- 2. What intervention/s will you implement to address this challenge (look back over your action reflections)?
- 3. What are you trying to achieve by implementing this intervention?
- 4. What actions need to be taken to implement this intervention? (Complete the matrix below to help in planning for this implementation.)
